

# **Student Approval of Campus Food 2022-2023**

Tyler Gaydos  
2023-10-02

## Summary

Students are no longer satisfied with the food options on campus. A growing concern for health and nutrition means that students are looking elsewhere for healthy meals. The campus should respond to this concern by providing healthy meals from its restaurants and stores.

## Data

The GD115N classes of 2022 and 2023 were given a survey about their opinions regarding the selection of food on campus in September. Questions gauged their interest in eating healthy, how often they ate on campus, and if they liked the food offered on campus.

## Interpretation of the Graph 1

Graph 1 shows both classes' interest in eating healthily. As you can see, there is a large jump in the number of students who care more about health than taste from 2022 to 2023.

## Interpretation of the Graph 2

This graph shows how many students agree with the statement “The food options available on campus are healthy.” The target approval with the group size of 25 students was 15. As you can see, the target approval was only just barely met in 2022, and approval falls far short of the target the next year.

## Conclusion

In conclusion, the food options on campus do not seem to be satisfactory for students any longer. With a growing concern for health and nutrition, the campus’ food options must respond by taking extra care to provide more healthy options for students.
